

## **LightLab Imaging Announces Live Broadcast of First-in-Man Cases with Next Generation OCT Coronary Imaging System**

WESTFORD, Mass. (November 5, 2007) - LightLab Imaging, Inc. today announced performance of first-in-man cases with its next generation OCT Coronary Imaging System. The cases were broadcast live from Siegburg, Germany, to an audience of over 1,000 attendees in the Main Arena of the Transcatheter Cardiovascular Therapeutics (TCT) meeting in Washington D.C. on October 24, 2007.

"This is the first clinical demonstration of our ultra high speed imaging system, which performs the imaging procedure in just several seconds with no occlusion of the patient's blood flow," said Akira Masuda, Chairman and CEO of LightLab. "The simplicity and inherent safety of the imaging procedure with this new system opens the door to its use during a broad range of cardiac interventional procedures."

The live case was performed by Prof. Dr. Eberhard Grube, of the Helios Heart Center in Siegburg, Germany. He commented "The images from this device are so detailed and ...this is such a huge step up in ease of use. I think we are all very fascinated. It makes a beautiful image, and now we are looking at things in a much different way."

"This is the most excitement I've seen at this meeting in two or three years," commented Gary Mintz, M.D., Chief Medical Officer of the Cardiovascular Research Foundation (CRF, the sponsor of TCT).

Moderator Gregg W. Stone, M.D., Professor of Medicine at Columbia University and Chairman of CRF, commented "the audience was amazed at these images," which showed a recently implanted stent and the tissues covering the stent with a resolution of approximately 15 microns, more than 10 times the resolution of intra-vascular ultrasound (IVUS). Dr. Stone noted, "The difference in resolution between OCT and IVUS is extraordinary. This should significantly improve our ability to make accurate decisions for patients."

### **About LightLab Imaging, Inc.**

LightLab Imaging, Inc. is a wholly owned subsidiary of Goodman Company Limited, Japan, (Jasdaq: 7535) LightLab Imaging is focused on the development and commercialization of OCT (Optical Coherence Tomography), a new high-resolution, high-speed imaging modality that uses advanced photonics for imaging and tissue characterization. When fully exploited, this technology has the potential to dramatically change the way physicians, researchers and scientists view and understand the human body to better diagnose and treat disease. LightLab's products are approved for use in Japan, Europe, and certain other geographies. The Company's products are not currently approved for use in the United States.
